

Basic Steganography

before we get started, this isn't what's known as least significant bit steganography. For that you will need proprietary software. This is more like hiding a handwritten note under a picture

<https://www.youtube.com/watch?v=TWEXCYQKyDc&t>

make sure the text file and the picture you want to hide it in is in your directory.

open Command Prompt, type in “dir” (your directory) press enter

```

To view your secret message, open your new picture as a txt file. If you want to hide a pdf, jpg or a full folder just make a normal zip file and put it in place of the txt file. To view the folder you will need 7-zip or something like it.
